Parser

Message

-from : String
-to : String
-subject : String
-body : String

+getFrom() : String
+validFrom() : Boolean
+setFrom(from : String) : void
+getTo() : String
+validTo() : Boolean
+setTo(to : String) : void
+getSubject() : String
+validSubject() : Boolean
+setSubject(subject : String) : void
+getBody() : String
+validBody() : Boolean
+setBody(body : String) : void

The Message implements the business logic; from parsing the incoming message to storing the appropriate data entries and replying to the proper end user.
